»SHERPA« 是 Goldhofer 第一款的货物和行李牵引车。该模块化牵引车可以按客户使用需要在以下配置中进行自由组合：三款不同功率的柴油发动机，一款使用锂离子电池的电动版，三款不同的驾驶舱类型和五款不同的配重类别，这些才只是刚刚开始。

由于极其简单和安全的操作，低且宽的驾驶室使用，以及符合人体工程学的轴和座椅悬挂，这款舒适的牵引车，能确保最佳的工作量。紧凑的尺寸，司机 360° 的视角和大量其他便捷的功能完美地补充了精心设计的 »SHERPA« 概念。此款牵引车的维修保养极其简单的同时，其大型柴油箱可以容纳足够 2 个台班的燃料。确保了极高的出勤率和可靠性。

Goldhofer 和 Schopf

The two German top-quality suppliers for towbarless and conventional aircraft tractors will inform about their latest and new developed products on their stand in Beijing.

»SHERPA« is the very first cargo and baggage tow tractor from Goldhofer. This modular vehicle can be customized and configured in line with the respective tasks: three different diesel engine power rates, an electric driven version with Lithium-Ion battery, three different cabin variants and five different ballasting classes are just the beginning!

Thanks to extremely easy and safe operation, low and wide cabin access as well as ergonomic axle and seat suspension, this comfortable vehicle ensures optimal workflows. Compact dimensions, a 360° view for the driver and a large number of other convenient functions ideally complement the well-thought-out »SHERPA« concept. And, while the maintenance effort for this tow tractor has been reduced to a minimum, its large diesel tank can hold enough fuel for two shifts. At the end of the day, this means that you're looking at extremely high levels of availability and reliability.

rage capacity levels. After completing the new build at AAT Terminal 2, back in 2006, Lödige was chosen to refurbish the 600,000t per annum air cargo terminal T1. Changes in technology had meant that spare parts were at times no longer available, so in less than a year the old equipment was removed, and new ETVs, RA decks, power roller decks and turntable were installed. Where possible and cost-effective, equipment was overhauled or repaired. The existing inventory control system was adapted with a state-of-the-art update and upgraded with an RFID ULD tracking system. At the same time, Lödige added more than 4,000 sqm in roller and ball deck capacity to extend ULD storage facilities in T2.

国际集团公司 Mayser 位于欧洲、美国以及中国昆山, 代表德国工程技术。Mayser 在安全技术、泡沫技术和模塑部件领域生产高质量的产品, 提供系统解决方案。除航空外, Mayser 的产品还用于公共交通、物流和汽车等领域。

为了防止在接近地面支持车辆时对飞机造成损坏, Mayser 提供满足 IATA 准则要求的合适的传感器解决方案。触觉和非接触式保护装置的组合提供适用于各种飞机接近区域的解决方案。

The internationally active Mayser Group is located in Europe, the US and Kunshan, China, and stands for German engineering. Mayser produces high-quality products and system solutions in the fields of safety technology, foam technology and mouldings. In addition to aviation, Mayser products are also used in areas such as public port, logistics and automotive.

To prevent aircraft damage through approaching ground support vehicles, Mayser offers suitable sensor solutions in compliance with IATA guidelines. The portfolio of pressure-sensitive and non-touch protection devices offers solutions for use in different aircraft approach zones.

Ultrasound is the ideal solution for non-touch, material-independent object detection and distance measurement. The ultrasound prevents collisions when approaching the aircraft by transmitting a signal to the control system, slowing or stopping the movement.

Safety bumpers serve as impact protection. They are active impact cushions with integrated sensors. The soft foam body prevents damage to objects during all stopping distances.

To adjust the level of mobile platforms in ground handling, the Safety Shoe was especially developed for the specific requirements of aircrafts in terms of collision protection. The pressure on the sensor sends a signal to the control unit of the lifting platform, which then lowers it until a level compensation is achieved.
